3000TP12G18

- Pulse Amplifier
- M1-M8
- 3000 Watts
- 12GHz-18GHz

Features

The Model 3000TP12G18 is a self contained, forced air cooled, broadband traveling wave tube (TWT) microwave amplifier designed for pulse applications at low to moderate duty factors where instantaneous bandwidth and high gain are required. A reliable TWT provides a conservative 3000 watts minimum peak RF pulse power at the amplifier output connector. Stated power specifications are at the fundamental frequency.

The amplifier's front panel digital display shows forward and reflected average power output or forward and reflected peak power, plus extensive system status information accessed through a series of menus via soft keys. Status indicators include power on, warm-up, standby, operate, faults, excess average or peak reflected power warning and remote. Standard features include a built-in IEEE-488 (GPIB) interface, 0dBm input, TTL Gating, VSWR protection, gain control, RF output sample port, auto sleep, plus monitoring of TWT helix current, cathode voltage, collector

voltage, heater current, heater voltage, baseplate temperature and cabinet temperature. Modular design of the power supply and RF components allow for easy access and repair. Use of switching mode power supplies results in significant weight reduction.

Housed in a stylish contemporary cabinet, the amplifier provides readily available pulsed RF power for a variety of applications in Test and Measurement, (including EMC RF pulse susceptibility testing), Industrial and University Research and Development, and Service applications. AR also offers a broad range of amplifiers for CW (Continuous Wave) applications.

Model Configurations

- E Package Alternatives.** May select an alternative from the following [E1C or (E1C and E2S) and/or E3H]:
- E1C Cabinet:** Without outer enclosure for rack mounting, size (W x H x D) 49 x 22 (5U) x 68 cm, 19 x 8.75 (5U) x 26.8 in., Subtract approximately 11 kg, 25 lbs, for removal of outer enclosure.
- E2S Slides:** slides installed, add approximately 2 kg, 5 lbs.
- E3H Handles:** Front pull handles installed.
- P Primary Power:** Must select one primary power from the following [P1 or P2]
- P1** 208 VAC $\pm 10\%$ 3-phase, 50/60 Hz, 2.0 KVA maximum
- P2** 190-260 VAC single phase, 50/60 Hz, 2.0 KVA maximum
- S Special Features:** May select a special feature (extra cost) from the following [S1R or S2M]:
- S1R** Reflected power sample port, type N female connector on rear panel. Forward and reflected sample port calibration data supplied on disk in Excel format at 51 points, evenly spaced over specified frequency response.
- S2M Special Mismatch Tolerance Operation:** Amplifier will permit up to 1.9kW reflected power at maximum 8 μ s pulse width and .8% duty, without VSWR trip or fold-back. Exceeding 1.9kW reflected power will cause the unit to truncate pulse within 2 μ s. For pulses beyond 8 μ s, exceeding 1kW will cause the unit to truncate the pulse. If exceeding .8% duty with reflected

power exceeding 1kW, the amplifier will truncate the pulse within 2 μ s. The amplifier will continue to truncate pulses until reflected power dissipates from outside source. Operation with truncated pulses for >250mS will result in latched "Truncated Pulse Fold Back" displayed on screen and over the remote interface, including an audible alarm. Operation with truncated pulses for 5 to 10 seconds will cause "Over Reverse" fault and a shutdown of high voltage and the amplifier.
