KEYSIGHT TECHNOLOGIES

Impressive 6.5 Digit 100 nV/10 fA Resolution, 10 µVrms Ultra Low Noise and Innovative Source Functions Accelerate Your Research and Development

Revolutionary power supply/source meets both existing and future test needs

Power supplies/sources are essential instruments for test and evaluation across the electronics industry. The on-going industry trends of reduced power consumption and faster communication data rates increasingly require power sources that can support lower levels of current and voltage. These requirements mandate that power supplies/sources meet ever higher levels of performance.

The Keysight Technologies, Inc. B2961A/B2962A 6.5 Digit Low Noise Power Source is a new bench-top power supply/source with revolutionary capabilities and functions not previously available. Its unique features include bipolar current sourcing and sinking, a programmable output resistance feature, and a time-domain waveform viewer supported in the graphical user interface (GUI).

You can choose between 1-channel (B2961A) and 2-channel (B2962A) models, allowing you to select the exact amount of bench-top power source performance to meet your testing needs.

- Best-in-class 6.5 digit resolution (100 nV/10 fA minimum resolutions)
- Wide bipolar (4-quadrant) voltage/current ranges (210 V/3 A DC, 10.5 A Pulse)
- Ultra low noise filter (10 µVrms, 1 nV/√ Hz at 10 kHz)
- Intuitive graphical user interface with wide 4.3” color LCD
- Convenient 4.5 digit voltage/current monitor
- Time domain waveform viewer for quick check and debug
- Precision 1 mHz –10 kHz arbitrary waveform generation capability
- Flexible programmable output resistance function.

In addition to these innovative bench-top power supply/source features, the Keysight B2961A/B2962A can be controlled remotely using Keysight PC-based BenchVue, Quick I/V Measurement Software or through any LXI compliant web browser. These capabilities simplify the task of incorporating measurement data and graphs into reports and presentations.

The superior performance and innovative functions of the Keysight B2961A/B2962A cover a broad range of test applications.

BEST IN CLASS RESOLUTION ▪ ULTRA-LOW NOISE ▪ INNOVATIVE SOURCE FUNCTIONS

Key Features and Benefits

Key Features	Benefit
Best-in-class resolution and wide bipolar range – 6.5 digit (100 nV/10 fA resolution) – 210 V & 3 A (DC)/10.5 A (pulsed) ranges – 4-quadrant operation	Very precise test and evaluation can be performed within a wide 4-quadrant voltage and current range.
External ultra low noise filter (option) – 10 µVrms (10 Hz – 20 MHz) – 1 nVrms/√Hz at 10 kHz	Reveal more of the true characteristics of your noise-sensitive devices and samples than ever before.
Intuitive GUI implemented on 4.3" color LCD – 4.5 digit voltage/current monitor – Time domain waveform viewer	Improved test and debug efficiency without the need for a PC.
Precision 1 mHz – 10 kHz arbitrary waveform generation capability – Voltage and current waveform generation up to 210 V/3 A – Support for six built-in waveforms and a user-defined arbitrary waveform	Goes beyond simple DC measurement and allows you to perform complex and more sophisticated testing of your devices and samples.
Versatile programmable output resistance function – Constant mode – Voltage/current emulation mode	Enables you to simulate a wide variety of devices and sample types.

A wide variety of Keysight B2961A/ B2962A applications

To reduce power consumption battery-powered devices continue to reduce their supply voltage levels, which requires ever more precise power sources to accurately characterize device behavior. Noise performance requirements also continue to become more stringent in application areas such as mobile communications due to higher data rates and faster clock frequencies. These technology trends make the testing of advanced products increasingly difficult due to their extreme sensitivity to noise and other external disturbances.

As a result, power supplies/sources with more precision, better noise performance and more versatile sourcing functions are now required. The Keysight B2961A/ B2962A meet these requirements, and they can be used for a wide variety of applications that permit you to perform critical tests and evaluations that have not been previously possible.

In addition, the Keysight B2961A/B2962A's superior performance and innovative functions make these instruments ideal companion power supplies/sources for use with other instruments such as network analyzers, spectrum analyzers, digital multimeters and nano-voltmeters.

Application examples

- A/D and D/A converters
- High precision analog IC and circuitry
- RFICs and circuitry
- Medical applications
- Cable/wire harnesses evaluation
- Voltage controlled oscillators (VCOs)
- Sensor devices and transducers
- Solar cells and the interface circuitry
- Electrochemical applications
- Research and education
- Crystal oscillators
- Current source for small voltage measurement
- Battery management
- Advanced materials evaluation

Superior Resolution and Wide Bipolar Ranges Meet your Most Challenging Test and Evaluation Needs

6.5 digit resolution enables precise analog-to-digital converter evaluation

One area where power supply sourcing resolution is important is analog-to-digital converter (ADC) evaluation. For an 8-bit ADC, a 1 V (peak to peak) signal would have a minimum step voltage of 3.9 mV. In this case a power source with 4.5 digit resolution is sufficient to use for the DC input voltage. However, for an ADC with 14-bits or more, 4.5 digit resolution is not enough. In this case the B2961A/B2962A's best-in-class 6.5-digit sourcing resolution is required in order to properly evaluate the ADC circuit.

ADC Resolution	Steps	Min Step Voltage	Conventional power supply resolution (4.5 digit/ Min 100 µV)	B2961A/B2962A resolution (6.5 digit/ Min 1 µV)
8-bit	256	3.9 mV	✓	✓
10-bit	1,024	1.0 mV	✓	✓
12-bit	4,096	244 µV	✓	✓
14-bit	16,384	61 µV		✓
16-bit	65,536	15 µV		✓

Wide bipolar range (100 nV to 210 V, 10 fA to 10.5 A) permits characterization of many types of devices and samples

The wide bipolar (four-quadrant) voltage and current ranges of the Keysight B2961A/B2962A are capable of supporting both current and future testing needs. In addition, since they support both very small and very large current and voltage signal levels the B2961A/B2962A can often replace several other bench-top instruments. As shown in Figure 2, you can program any voltage and current value within the B2961A/B2962A's wide output range without worrying about any zero-crossing glitches.

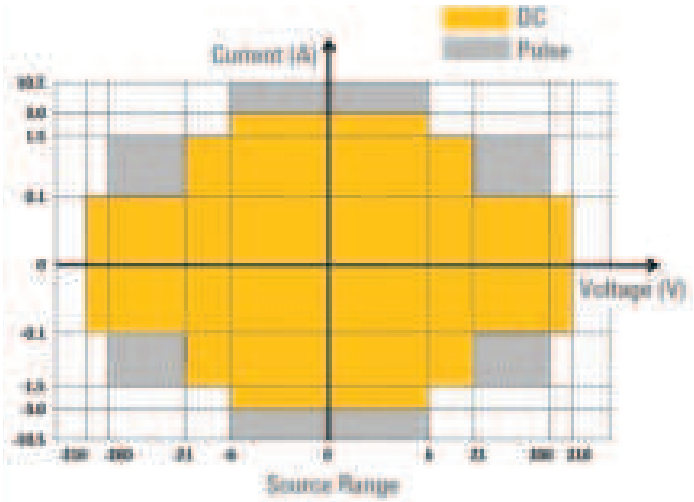

Figure 2. Wide bipolar voltage and current ranges (4-quadrant operation)

Fast settling time increases your test efficiency

Unlike most conventional power supplies/sources, the Keysight B2961A/B2962A can quickly settle to their final value with 6.5 digit resolution throughout their entire output ranges. This reduces test times and improves measurement efficiency, especially when making multiple tests in sequence. See Figure 3.

Best-in-Class Noise Performance (10 µVrms) Unlocks the True Characteristics of Your Devices and Samples

Three optional filters available for different test needs

For applications requiring ultra-low noise performance, the Keysight B2961A/B2962A supports three external filter options. This provides you with the flexibility to select the noise filter price/performance point that best meets your needs. The low noise filter (LNF) provides the same level of RMS noise as linear regulator-based power supplies and sources, while the high current ultra low noise filter (HC-ULNF) and the ultra low noise filter (ULNF) reduces noise to an impressive 10 µVrms. See Figure 4.

Figure 4. Optional external noise filters can meet your most stringent noise requirements

HC-ULNF and ULNF provide unprecedented low-noise performance (10 µVrms and 1 nVrms/√Hz at 10 kHz) in a low-cost bench-top instrument

As shown in Figure 5 both HC-ULNF and ULNF reduce the voltage noise of the Keysight B2961A/B2962A to 10 µVrms in the frequency range of 10 Hz – 20 MHz. The differences between HC-ULNF and ULNF are voltage and current coverage. HC-ULNF allow it to source up to 21 V and 500mA, and ULNF allowing up to 42 V and 105 mA. This outstanding low noise performance can be used to evaluate noise-sensitive devices and circuits such as ADC/DAC as well as many other types of analog and RF ICs. In addition, see Figure 6. the HC-ULNF and ULNF minimizes the noise density to 1 nVrms/√Hz at 10 kHz, which is required for the phase noise evaluation of oscillator circuits such as VCOs, crystal oscillators, etc. There are two user-selectable output impedance settings, 2-wire (50 Ω) and 4-wire (low impedance close to zero), to provide optimal flexibility when characterizing your devices and samples.

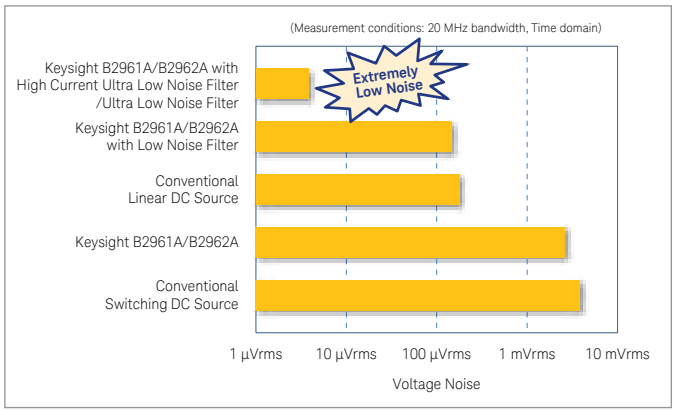

Figure 5. HC-ULNF and ULNF dramatically reduce output noise

LNF supports full 210 V and 3 A bipolar output range

The LNF supports the B2961A/B2962A's wide bipolar voltage and current ranges (up to 210 V/3 A) while providing noise levels comparable to those of linear power supplies. In addition, when using the LNF you can still make 4-wire (Kelvin) measurements to eliminate residual cable resistance effects. For applications requiring a moderate level of low-noise performance, the LNF provides a cost-effective means to achieve low-noise sourcing capability for a modest price.

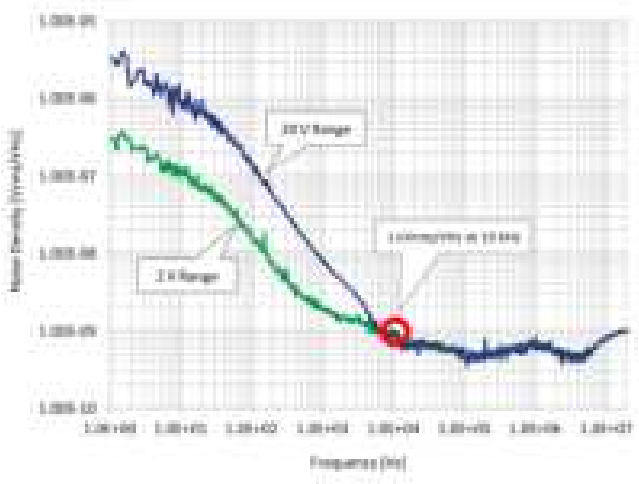

Figure 6. HC-ULNF and ULNF provide excellent noise density performance

Intuitive Front-Panel GUI and Wide 4.3” Color LCD Maximize Test and Debug Efficiency

Many power supplies and sources only possess a numerical display or a very basic dot matrix display, which are only effective at showing DC values. In contrast, the Keysight B2961A/B2962A has an easy-to-use front panel GUI and a wide 4.3” color LCD. These make it easy to set up sourcing parameters and to display complex current and voltage waveforms. For added convenience, the Keysight B2961A/B2962A provides multiple viewing modes: single view, dual view (B2962A only) and graph view. These capabilities not only increase test and evaluation efficiency, but they also make the instrument easy to use without the need to struggle through paper manuals. See Figure 7.

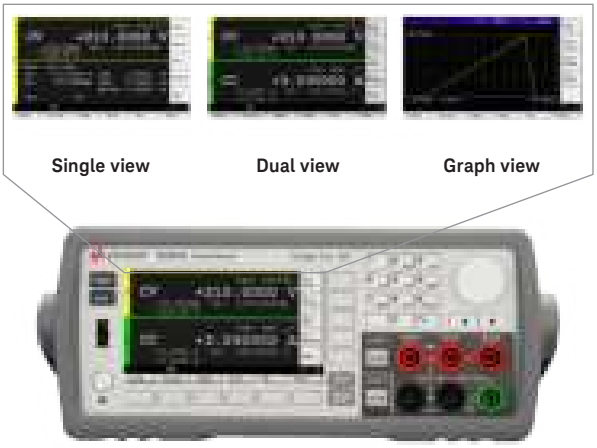

Figure 7. Three viewing modes provide you with flexible and efficient testing

Integrated voltage and current monitoring capability verifies output with 4.5 digit resolution

The Keysight B2961A/B2962A has a built-in voltage and current monitoring feature that enables you to verify the actual voltage and current output. You can view the sourced voltage and current values with 4.5 digit numeric resolution in both single and dual viewing modes. With minimum voltage and current measurement resolution of 10 µV and 1 pA (respectively), a digital multi-meter (DMM) is not necessary for measurement verification.

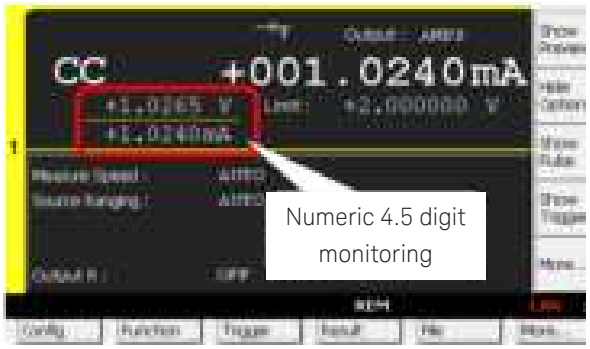

Figure 8. Perform quick status checks with 4.5 digit numeric display

Time domain waveform viewer facilitates quick check and debug of output waveforms

In addition to the numeric monitoring, the Keysight B2961A/B2962A Power Source has a time domain waveform viewing capability (Figure 9). For most power supplies and sources, you cannot view the actual waveform you are applying to your device or sample without using some other sort of external instrument. The Keysight B2961A/B2962A’s time domain monitoring capability displays applied waveforms on its LCD display (Graph View mode), enabling you to verify that you are applying the correct signal to your DUT.

GUI Based Intuitive Front Panel Design with Rich Standard Interfaces for Your Bench-Top Needs

In addition to the graphical user interface and easy-to-use front panel, the Keysight B2961A/B2962A integrates standard interfaces such as USB 2.0, LAN (LXI class C compliant), digital I/O and GPIB in a bench-top instrument form. The optional filters are well designed for the B2961A/B2962A and easy to attach and detach to/from front/rear channels.

Flexible Source Functions Beyond a DC Instrument Remove Your Test Restrictions

Pre-defined and arbitrary waveforms increase your test and evaluation flexibility

The Keysight B2961A/B2962A features full-fledged test and evaluation beyond conventional static DC testing. The pre-defined waveform generation capability provides six waveforms: sinusoidal, exponential, ramp, triangle, square and trapezoidal. In addition to these commonly used waveforms, you can set user-defined arbitrary waveforms with up to 100,000 points of setting. These flexible output capabilities should help you make deeper evaluation of your devices/samples that you've tested with other instruments than power supplies and sources.

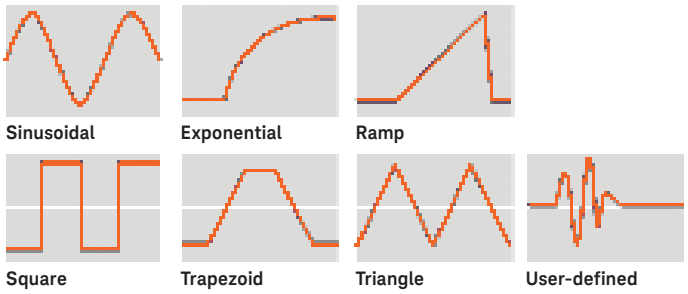

Figure 10. Convenient built-in waveform generation capabilities

Precision and wide voltage/current waveform generation

The arbitrary waveform generation capability of Keysight B2961A/B2962A can generate both precision voltage and current waveforms in 1 mHz –10 kHz frequency range. Although some of conventional voltage/current source instruments feature a waveform generation capability, the output waveforms do not have enough accuracy as shown in Figure 11A. In contrast, as shown in Figure 11B, the Keysight B2961A/B2962A can generate cleaner and more precision waveforms for more sensitive device/sample testing. You can also make use of the same output voltage/current ranges (210 V/3 A) and the same resolutions (100 nV/10 fA) as those of original DC voltage/current specifications. This outstanding capability helps you make precision test and evaluation even in time domain.

Preview of output waveform and simple user interface helps quick and reliable test

The Keysight B2961A/B2962A provides convenient and user-friendly interface for this arbitrary waveform generation capabilities. The preview mode shows the waveform shape on the same display that you set the waveform parameters, and enables you to check the forcing waveform shape in advance. This well-considered user interface provides you with an intuitive test environment, and improves your test and evaluation efficiency.

Programmable Output Resistance and DC Voltage/Current Output Emulation Capabilities Solve Real-World Measurement Challenges

The B2961A/B2962A's programmable output resistance function provides flexible measurement capabilities

The Keysight B2961A/B2962A has a programmable output resistance feature that allows you to control the output behavior of the power source. It supports two test modes, constant and V/I emulation, to provide maximum flexibility and versatility. Constant mode allows you to specify an output resistance value (either positive or negative) such that the output will respond exactly as if the specified resistance value were in series (voltage source mode) or in parallel (current source mode) with the source output. The constant mode can emulate resistance values over a wide range, and the negative resistance capability is particularly useful for cancelling out unwanted external resistances. For example, you can use the negative resistance feature to eliminate the resistance of long connection wires without the need to use a 4-wire (Kelvin) connection scheme. This is especially useful in situations where a 4-wire measurement is not possible due to packaged device limitations or to the absence of sense pads for probing.

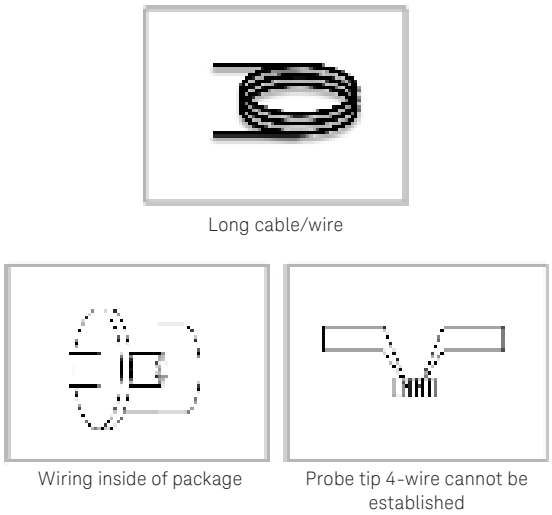

Figure 13. Measurement situations that benefit from Programmable Output Resistance's Constant mode feature

DC voltage/current characteristic emulation feature provides powerful bench-top analysis capabilities

The programmable output resistance's V/I emulation mode function allows you to simulate any DC voltage/current output characteristic. You can specify up to 16 voltage and current points to create the desired DC electrical characteristic. Since in this mode the Keysight B2961A/B2962A responds exactly like the equivalent device or sample, it is useful for simulating electrical behavior when an actual component is not available as well as for testing corner cases. In the example shown in Figure 14, the output of an active device (solar cell) is simulated using the V/I emulation mode function. This ability to simulate both active and passive devices provides unprecedented power and flexibility in a compact bench-top form factor. (Figure 15).

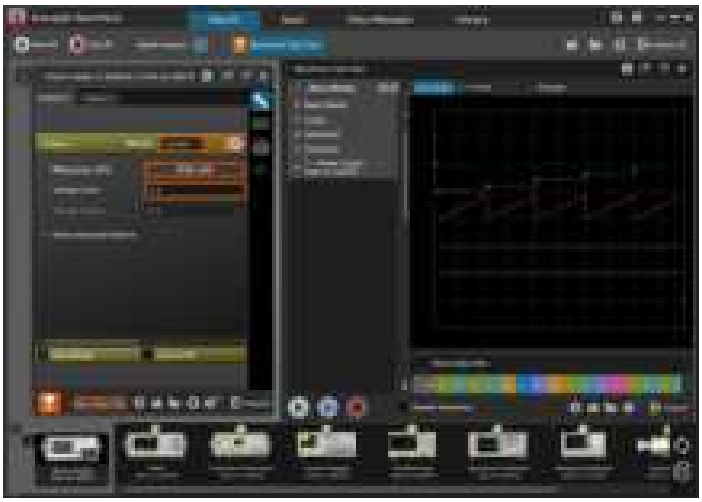
Multiple Communication Methods and Software Provide Flexible and Convenient Remote Control Options

BenchVue

BenchVue allows you to control the B2961A/B2962A as voltage/current sources from a PC without the need to do any programming. In addition, because BenchVue supports a wide variety of Keysight instruments (oscilloscopes, meters, etc.) it is a good choice when you need to integrate together many different types of instruments on a benchtop.



Quick I/V Measurement Software

Keysight supplies PC-based Quick I/V Measurement Software with the Keysight B2961A/B2962A at no charge. This software makes it easy to quickly setup and perform voltage or current sourcing and to display measurement data in tables and graphs without the need to program. Using Keysight Quick IV software you can control up to four instrument channels.

Graphical Web Interface

The Keysight B2961A/B2962A has a built-in web server that allows it to be controlled using a web browser. This allows you to enjoy the convenience of external PC control without the need for any special software. Simply connect your computer to the instrument via its LAN port, type in the IP address of the Keysight B2961A/B2962A unit and begin making interactive tests.

Ready-to-use instrument drivers simplify Programming

For users that want to create their own customized software, IVI-C and IVI-COM drivers for the Keysight B2961A/B2962A are available. In addition, National Instruments LabView drivers are available at NI.COM.

4. ±1 uA 100 kΩ load, ±10 uA 100 kΩ load, ±10 mA 100 Ω load

User-defined waveforms:

Waveform length	1 to 100,000 points
Sample rate	0.001 to 100,000 Sa/s, 250 ns resolution
Storage	Non-volatile memory and USB memory are both available. Non-volatile memory can store one waveform with a length of up to 2500 points. USB memory can store waveforms of up to 100k points.

Output characteristics

Temperature coefficient(0 to 18 °C and 28 °C to 50 °C)	± (0.1 x Accuracy) /°C
Max output power and source/sink limits	31.8 W ±6 V@ ±3.03 A, ±21 V@ ±1.515 A, ±210 V@ 105 mA, four quadrant source or sink operation
Output location	Channel 1 at front, and channel 2 at rear
Output connectors	Banana jack. Triaxial connections are recommended for sourcing less than 1 nA. A banana jack to triaxial adapter is available for low current source.
Low terminal connection	Chassis grounded or floating
Sensing Modes	2-wire or 4-wire (Remote-sensing) connections
Maximum load	Normal mode: 0.01 µF High capacitance mode: 50 µF
DC floating voltage	Max ±250 V DC between low force and chassis ground
Guard offset voltage (V source)	< 4 mV
Remote sense operation range	Max voltage between High Force and High Sense = 3 V Max voltage between Low Force and Low Sense = 3 V
Common mode isolation	> 1 GΩ, < 4500 pF
Max sense lead resistance	1 kΩ for rated accuracy
Sense input impedance	> 10 GΩ
Current limit/compliance	Accuracy is same as current source. Min value is 1 % of range, or 1 nA in 10 nA range.
Voltage limit/compliance	Accuracy is same as voltage source. Min value is 1 % of range, or 20 mV in 200 mV range
Over range	101 % of source range for 1.5 A and 3 A ranges. 105 % of source range other than 1.5 A and 3 A ranges. No over range for 200 V range with current exceeding 105 mA pulse only condition.
Over temperature protection	Output turns off then resets at over temperature sensed internally

Voltage source:

Settling time: Time required to reach within 0.1 % of final value at open load condition. Step is 10 % to 90 % range

Voltage range	Settling time
200 mV	< 50 µs

3 A	250 mA/µs, 13 kHz	270 mA/µs, 13 kHz	260 mA/µs, 13 kHz		0.041 Ω

Note: Slew rate and small signal bandwidth can be down to -20% in maximum.

I source overshoot	< ±0.1 % (< ±0.3 % for 3 A range). Step is 10 % to 90 % range, resistive load
Current source range change overshoot	≤ 250 mV/R load, 20 MHz bandwidth
Line regulation/load regulation	Included in current source specifications.

High capacitance mode

The high capacitance mode supports sources and measurements when the load capacitance is greater than 0.01 µF. In high capacitance mode the maximum allowed load capacitance value is 50 µF.

Voltage output settling time:		Time required to reach within 0.1 % of final value with 4.7 µF capacitive load on a fixed range at specified current range and limit value	
		200 mV, 2 V ranges	600 µs, at 1 A limit
		20 V range	1.5 ms, at 1 A limit
		200 V range	20 ms, at 100 mA limit
Current measurement settling time		Time required to reach 0.1 % of final value after the voltage source stabilized in a fixed range. Vout is 5 V unless noted.	
		1 µA range	230 ms
		10 µA, 100 µA ranges	23 ms
		1 mA, 10 mA ranges	0.23 ms
		100 mA to 3 A ranges	100 µs
Mode change delay			
	Delay into high cap mode	1 µA range	230 ms
		10 µA, 100 µA ranges	23 ms
		1 mA to 3 A ranges	1 ms
	Delay out of high cap mode	All ranges	10 ms
Noise 10 Hz to 20 MHz (20 V range)			4.5 mVrms
Voltage source range change overshoot (20 V range or below)			< 250 mV, 20 MHz bandwidth
High capacitance mode working conditions		V/I mode: Voltage source mode only Range: Current measurement range is limited to fixed range only. 10 nA and 100 nA ranges are not available.	
Current limit		≥ 1 µA	

Programmable output resistance*

In its default state the Keysight B2961A/B2962A behaves like either an ideal voltage source with a negligibly small source resistance or an ideal current source with a huge source resistance. The programmable output resistance feature allows you to specify either a particular output resistance or a specific voltage versus current source characteristic. This feature is ideal for emulating a wide variety of devices (such as batteries, photovoltaic cells, sensors, transducers, etc.) that are otherwise difficult to simulate.

Mode		Constant or V/I Emulation
Programmable resistance range:	Series resistance (Rs) at voltage source	- (Load Resistance/2) ≤ Rs ≤ Load Resistance, for resistive load Rs ≤ 25 Ω at 3 A range, ≤ 100 Ω at 1 A and 1.5 A ranges, ≤ 1 kΩ at 100 mA range, or ≤ 10 kΩ at other ranges, Rs can be limited by capacitive load.
	Shunt resistance (Rsh) at current source	Load Resistance ≤ Rsh ≤ 2 GΩ, for resistive load Rsh ≥ 10 MΩ at 10 nA and 100 nA ranges, ≥ 1 M Ω at other ranges, Rsh can be limited by capacitive load.
Emulation mode		Emulation mode allows you to program a non-linear resistance. You specify the desired voltage/current characteristic using a tabular format
	Max number of points:	16 (piecewise linear interpolation between points)

* Programmable output resistance is only available for DC output.

External low noise filter supplemental characteristics

The Keysight B2961A/B2962A supports dedicated external low-noise filters; they are available as an option or as an accessory. They connect to the banana jack outputs of each Keysight B2961A/B2962A channel.

High Current Ultra Low Noise Filter (N1294A-020)			
Maximum output range		21 V / 500 mA (DC)	
Output connector		BNC	
Output/residual resistance		10 Ω nominal (2-wire), 0.3 Ω nominal (4-wire. 4-wire connected inside of filter)	
Small signal bandwidth		23 Hz nominal (2-wire), 8 Hz nominal (4-wire)	
Noise	Voltage source	0.1 to 10 Hz	Same as voltage specification
		10 to 20 MHz	10 µVrms, 1nVrms√Hz at 10 kHz (20 V / 100 mA range, 50 Ω load)
	Current source	0.1 to 10 Hz:	Same as current specification
		10 to 1 MHz	8 µArms (20 V / 1 A range, 2 Ω load)
Settling time	Voltage source[1]	80 ms (2-wire), 140 ms (4-wire)	
	Current source[2]	11 ms (2-wire), 150 ms (4-wire)	

1. Time required to reach within 0.1 % of final value at open load condition. Step is 10 % to 90 % range. At 20 V range, 500 mA limit/1 A range
2. Time required to reach within 0.1 % of final value at short condition. Step is 10 % to 90 % range. At 500 mA (1 A) range, 20 V limit / 20V range

Load transient recovery time:	Time to recover to within the settling band following a load change.
	250 mA current change[1]
Settling band	± 20 mV
Time	50 ms (2-wire), 85 ms (4-wire)

1. At a load change to change the flowing current from +10 mA to +260 mA, 10 V voltage force, 20 V range, 500 mA limit.

Supported ranges	Voltage	200 mV to 200 V ranges (21 V maximum)
	Current	1 mA to 1 A ranges (500 mA maximum)
Maximum capacitive load		50 µF (for 4-wire)
Dimensions		41 mm H x 58.2 mm W x 141.5 mm D (When the filter is inserted to the output connector of B2961A/ B2962A, the depth is 126.5 mm.)
Weight		0.3 kg

Note:
- The 10 A pulse range and programmable output resistance capability are not supported by external filters.
- For the current output, only DC is supported when using with external filters.
- The current measurement data monitored by the built-in voltage/current monitor can be influenced by the charge and discharge current of the capacitance inside of the filters.

Ultra Low Noise Filter (N1294A-021)			
Max output range		42 V / 105 mA (DC)	
Output connector		BNC	
Output / residual resistance		50 Ω nominal (2-wire), 0.3 Ω nominal (4-wire. 4-wire connected inside of filter)	
Small signal bandwidth		23 Hz nominal (2-wire), 8 Hz nominal (4-wire)	
Noise	Voltage source	0.1 to 10 Hz	Same as voltage specification
		10 to 20 MHz	10 µVrms, 1 nVrms√Hz at 10 kHz (20 V / 100 mA range, 50 Ω load)
	Current source	0.1 to 10 Hz	Same as current specification
		10 to 1 MHz	300 nArms (20 V / 100 mA range, 10 Ω load)
Settling time	Voltage source[1]	80 ms (2-wire), 140 ms (4-wire)	
	Current source[2]	11 ms (2-wire), 150 ms (4-wire)	

1. Time required to reach within 0.1 % of final value at open load condition. Step is 10 % to 90 % range. At 20 V range, 100 mA limit/100 mA range
2. Time required to reach within 0.1 % of final value at short condition. Step is 10 % to 90 % range. At 100 mA range, 20 V limit / 20V range

Load transient recovery time:	Time to recover to within the settling band following a load change.
	50 mA current change[1]
Settling band	± 20 mV
Time	50 ms (2-wire), 85 ms (4-wire)

1. At a load change to change the flowing current from +10 mA to +60 mA, 10 V voltage force, 20 V range, 100 mA limit

Supported ranges	Voltage	200 mV to 200 V ranges (42 V max)
	Current	10 µA to 100 mA ranges (105 mA max)
Maximum capacitive load		50 µF (for 4-wire)
Dimensions		41 mm H x 58.2 mm W x 141.5 mm D (When the filter is inserted to the output connector of B2961A/ B2962A, the depth is 126.5 mm.)

Low Noise Filter (N1294A-022)			
Maximum output range		210 V / 3 A (DC)	
Output connector		Banana, 2-wire/4-wire	
Output / residual resistance		0.3 Ω nominal (2-wire)	
Small signal bandwidth		2 kHz nominal (1 A and 3 A ranges), 800 Hz nominal (100 mA range)	
Noise	Voltage source	0.1 to 10 Hz	Same as voltage specification
		10 to 20 MHz	350 µVrms (20 V / 1.5 A range, 50 Ω load)
	Current source	0.1 to 10 Hz:	Same as current specification
		10 to 1 MHz	450 µArms (20 V / 1.5 A range, 0.67 Ω load)
Settling time	Voltage source[1]	640 µs (2-wire/4-wire)	
	Current source[2]	1.2 ms (2-wire/4-wire)	

1. Time required to reach within 0.1 % of final value at open load condition. Step is 10 % to 90 % range. At 20 V range, 1.5 A limit/1.5 A range
2. Time required to reach within 0.1 % of final value at short condition. Step is 10 % to 90 % range. At 1.5 A range, 20 V limit / 20V range

Load transient recovery time:	Time to recover to within the settling band following a load change. 800 mA current change[1]
Settling band	± 20 mV
Time	450 µs (2-wire), 650 µs (4-wire)

1. At a load change to change the flowing current from +100 mA to +900 mA, 10 V voltage force, 20 V range, 1.5 A limit

Supported ranges	Voltage	200 mV to 200 V ranges (210 V max)
	Current	10 µA to 3 A ranges (3 A max)
Maximum capacitive load		1 mF
Dimensions		41.5 mm H x 58.2 mm W x 127.5 mm D (When the filter is inserted to the output connector of B2961A/ B2962A, the depth is 112.5 mm.)

Keysight B2900A Family

The B2900A series is a member of B2900 Precision Instrument Family, which provide a variety of precision measurement solutions with both sourcing and measurement capabilities. The B2900A series of Source Measure Units (SMUs) have 6.5-digit resolution, enabling 100 nV/10 fA sourcing and measurement. The B2980A series of picoammeter/electrometer have down to 0.01fA and up to 10 PΩ. Further information on the B2900 Precision Instrument Family is available at **http://www.keysight.com/find/b2900a**.
