Product data applies under the following conditions:

- Three hours of storage at ambient temperature followed by 30 minutes of warm-up operation
- Specified environmental conditions met
- · Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as <, ≤, >, ≥, ± or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Non-traceable specifications with limits (n. trc.)

Represent product performance that is specified and tested as described under "Specifications with limits" above. However, product performance in this case cannot be warranted due to the lack of measuring equipment traceable to national metrology standards. In this case, measurements are referenced to standards used in the Rohde & Schwarz laboratories.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value, e.g. dimensions or resolution of a setting parameter. Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter, e.g. nominal impedance. In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are designated with the format "parameter: value".

Non-traceable specifications with limits, typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP standard, chip rates are specified in million chips per second (Mcps), whereas bit rates and symbol rates are specified in billion bit per second (Gbps), million bit per second (Mbps), thousand bit per second (kpps), million symbols per second (Msps) or thousand symbols per second (kpps), and sample rates are specified in million samples per second (Msample/s). Gbps, Mcps, Msps, ksps and Msample/s are not SI units.

Differential signals

General description	to separate input channels. Becau	Calculation of differential and common mode signals from p part and n part connected to separate input channels. Because of the R&S®RTP digital trigger concept, these signals can be used as a trigger input.	
Input channels		channel 1, channel 2, channel 3, channel 4	
Differential signal		difference between any two input channels	
Common mode signal		sum of any two input channels	
Maximum number of outputs 5	differential signals	2	
	common mode signals	2	

High definition mode

General description	using digital filtering, leading to a	The high definition mode increases the numeric resolution of the waveform signal by using digital filtering, leading to a reduced noise. Because of the R&S®RTP digital trigger concept, the signals with increased numeric resolution are used as input for triggering.	
Numeric resolution	bandwidth	resolution	
	10 kHz to 200 MHz	16 bit	
	300 MHz	12 bit	
	500 MHz	12 bit	
	1 GHz	11 bit	
	2 GHz	10 bit	
Realtime sampling rate		max. 10 Gsample/s on each channel	

Trigger system

Sources		channel 1, channel 2, channel 3, channel 4, inverted channels, external trigger, line trigger, differential, common mode
Trigger bandwidth	max.	same bandwidth as analog bandwidth for all vertical scales and trigger types
	user-defined	1 GHz to analog bandwidth

⁵ Together with R&S®RTP-K122 realtime deembedding extension, only one output can be calculated, differential or common mode.

Trigger sensitivity		0.0001 div, from DC to analog bandwidth
		for all vertical scales and trigger types
Trigger hysteresis	modes	auto (standard) or manual
	sensitivity	0.0001 div, from DC to analog bandwidth
		for all vertical scales and trigger types
Trigger jitter	full-scale sine wave of frequency set to	< 80 fs (RMS) (meas.)
	-3 dB bandwidth	
Sweep mode		auto, normal, single, n single
Event rate	max.	one event for every 200 ps time interval
Trigger level range	internal	±5 div from center of screen
	external	see External trigger input
Holdoff range	time	100 ns to 10 s, fixed and random
	events	1 event to 2 000 000 000 events

Main trigger modes			
Edge	triggers on specified slope (posi	triggers on specified slope (positive, negative or either) and level	
Glitch	triggers on glitches of positive, r specified width	triggers on glitches of positive, negative or either polarity that are shorter or longer than specified width	
	glitch width	25 ps to 10 000 s	
Width	triggers on positive or negative inside or outside the interval	pulse of specified width; width can be shorter, longer,

Runt	fails to cross a second threshold can be arbitrary, shorter, longer		
	runt pulse width	25 ps to 10 000 s	
Window	00	xits a specified voltage range; triggers also when signal ge range for a specified period of time	
Timeout	triggers when signal stays high,	triggers when signal stays high, low or unchanged for a specified period of time	
	timeout	25 ps to 10 000 s	
Interval		triggers when time between two consecutive edges of same slope (positive or negative) is shorter, longer, inside or outside a specified range	
	interval time	25 ps to 10 000 s	
Slew rate	triggers when the time required	triggers when the time required by a signal edge to toggle between user-defined upper and lower voltage levels is shorter, longer, inside or outside the interval; edge slope	
	toggle time	25 ps to 10 000 s	
Data2clock	two input channels; monitored ti	triggers on setup time and hold time violations between clock and data present on any two input channels; monitored time interval may be specified by the user in the range from –100 ns to 100 ns around a clock edge and must be at least 100 ps wide	
Pattern		triggers when a logical combination (and, nand, or, nor) of the input channels stays true for a period of time shorter, longer, inside or outside a specified range	
State		tion (and, nand, or, nor) of the input channels stays true	

Advanced trigger modes

Spurious-free dynamic range (excl. harmonics)	measured for an input carrier with frequency 950 MHz and level –1 dBm at input sensitivity 70 mV/div, corresponding to 0 dBm input range of the oscilloscope, using the FFT with center frequency 3 GHz, span 5 GHz, RBW 100 kHz	66 dB (meas.)
Second harmonic distortion	measured for an input carrier with frequency 950 MHz and level –1 dBm at input sensitivity 70 mV/div, corresponding to 0 dBm input range of the oscilloscope, using the FFT with center frequency 3 GHz, span 5 GHz, RBW 100 kHz	–52 dBc (meas.)
Third harmonic distortion	measured for an input carrier with frequency 950 MHz and level –1 dBm at input sensitivity 70 mV/div, corresponding to 0 dBm input range of the oscilloscope, using the FFT with center frequency 3 GHz, span 5 GHz, RBW 100 kHz	-43 dBc (meas.)
Third order intercept point (TOI)	measured for two input tones with frequencies 2.436 GHz and 2.438 GHz and level 0 dBm at input sensitivity 160 mV/div, corresponding to 8 dBm input range of the oscilloscope, using the FFT with center frequency 2.437 GHz, span 10 MHz, RBW 30 kHz	23.5 dBm (meas.)
Input VSWR	input frequency ≤ 4 GHz > 4 GHz to ≤ 16 GHz	1.25 (meas.) 1.4 (meas.)

Waveform measurements

General features	measurement panels	up to 8 measurement panels; each panel may contain any number of automatic measurements of the same category
	gate	delimits the display region evaluated for automatic measurements
	reference levels	user-configurable vertical levels define support structures for automatic measurements
	statistics	displays maximum, minimum, mean, standard deviation, RMS and measurement count for each automatic measurement
	track	measurement results displayed as continuous trace that is time-correlated to the measurement source
	long-term analysis	history of selected measurements as trace against count index
	histogram	available for the main measurement of each measurement panel; automatic or manual selection of bin number and scale; counters for measurements under, within and over the histogram range
	limit check	measurements tested against user- defined margins and limits; pass or fail conditions may launch automatic response: acquisition stop, beep, print and save waveform

Waveform math

General features	number of math waveforms	up to 8
	number of reference waveforms	up to 4
	waveform arithmetic	user-selectable average or envelope of consecutive waveforms
Algebraic expressions	user may define complex mathematica measurement results	al expressions involving waveforms and
	math functions	add, subtract, multiply, divide, absolute value, square, square root, integrate, differentiate, exp, log ₁₀ , log _e , log ₂ , rescale, sin, cos, tan, arcsin, arccos, arctan, sinh, cosh, tanh, autocorrelation, crosscorrelation
	logical operators	not, and, nand, or, nor, xor, nxor
	relational operators	Boolean result of =, \neq , >, <, \leq , \geq
	frequency domain	spectral magnitude and phase, real and imaginary spectra, group delay
	digital filter	lowpass, highpass or user-defined filter (specified by up to 1 million FIR filter coefficients)
	special functions	CDR transform; requires R&S®RTP-K12 option
Optimized math	operators	add, subtract, multiply, invert, absolute value, differentiate, log ₁₀ , log _e , log ₂ , rescale, FIR, FFT magnitude

Spectrum analysis

General description	spectrum analysis allows signal analysis in	n the frequency domain
Spectrum	sources	channel 1, channel 2, channel 3, channel 4
	spectrum types	magnitude spectrum, phase spectrum
	setup parameters	center frequency, frequency span, automatic RBW, resolution bandwidth,
		gate position, gate width, vertical scale, vertical position, frame overlap
	scaling	
	magnitude spectrum	linear, dB, dBm, dBμV, dBmV, dBV, dBps, dBns, dBμs, dBms, dBs, dBHz, dBkHz, dBMHz, dBGHz, dBμA, dBmA, dBA
	phase spectrum	degrees, radians
	frequency range	DC to Nyquist frequency (1/2 sample rate, e.g. 20 GHz at 40 Gsample/s)
	frequency axis scaling	linear or logarithmic
	span	1 Hz to 20 GHz
	resolution bandwidth	≤ 1 Hz to 2 GHz
	window types	rectangular, Hamming, Hann, Blackman Harris, Gaussian, Flattop, Kaiser Bessel
	trace types	normal, envelope, average, RMS, min. hold, max. hold
	spectrum measurements	channel power, bandwidth, occupied bandwidth, various THD variants (total harmonic distortion), harmonic search, peak list (with user definable threshold)
	max. realtime waveform acquisition rate	> 1000 waveforms/s
	spectrogram	requires R&S®RTP-K37 option

Search and mark function

General description	scans acquired waveforms for occurrence of a user-defined set of events and highlights each occurrence		
Basic setup	source	all physical input channels, math waveforms, reference waveforms	
	search panels	up to 8, where each panel may manage multiple event searches	
	search mode	manually triggered or continuous	
	search conditions		
	supported events	edge, glitch, width, runt, window, timeout, interval, slew rate, data2clock, state	
	event configuration	identical to corresponding trigger event	
	event selection	single or multiple events on same source	
Search oscilloscope	mode	current waveform, gated time interval	
Result visualization	table		
	sort mode	horizontal position or vertical value	
	max. result count	specifies max. table size	
	zoom window	centered on highlighted event	

Display characteristics

Diagram types	Yt, XY, spectrum, long-term measurement, spectrogram (spectrogram requires R&S®RTP-K37 option)
Horizontal divisions	10
Vertical divisions	10
Display interface configuration	display area can be split up into separate diagram areas by dragging and dropping signal icons; each diagram area can hold any number of signals; diagram areas may be stacked on top of each other and later accessed via the dynamic tab menu
Signal icon	each active waveform is represented by a separate signal icon on the signal bar; the signal icon displays individual vertical and acquisition settings; a waveform can be minimized to signal icon to appears as a realtime preview in miniature; measurement results may also be minimized to a signal icon

Toolbar	quick access to 28 important tools; directly set most common parameters in a simple menu and access to more detailed parameters in main menu; user-defined selection of tools in toolbar
Upper menu	displays trigger, horizontal and acquisition settings; quick access to settings
Main menu	provides access to all instrument settings in compact menu
Axis label	X-axis ticks and Y-axis ticks labeled with tick value and physical unit
Diagram label	diagrams may be individually labeled with a descriptive user-defined name
Diagram layout	grid, crosshair, axis labels and diagram label may be switched on and off separately
Persistence	50 ms to 50 s, or infinite
Zoom	user-defined zoom window provides vertical and horizontal zoom;
	each diagram area supports multiple zoom windows;
	touchscreen interface simplifies resize and drag operations on zoom window
Signal colors	predefined or user-defined color tables for persistence display

R&S®RTP-K12 jitter analysis

General description	The R&S®RTP-K12 jitter analysis option extends the functionality of the standard R&S®RTP firmware with a suite of measurement, analysis and visualization tools for signal integrity analysis and jitter characterization.		
Waveform measurements	category	jitter	
	measurement functions	cycle-to-cycle jitter, N-cycle jitter, cycle-to-cycle width, cycle-to-cycle duty cycle, time-interval error, data rate, unit interval, skew delay, skew phase; the standard time measurements period, frequency and setup/hold are also available in the jitter category for convenience	
	track	measurement results displayed as continuous trace that is time-correlated to the measurement source; applicable to time measurements from categories "jitter" and "amplitude and time"; track trace may be used as source for cursor measurements, automatic measurements, math waveforms and reference waveforms	
Waveform math	FFT on track	FFT spectrum of the track trace of measurement results	
	CDR transform	recovers clock timing from source waveform with software CDR and generates synthetic clock waveform that is time-correlated to source	
Software clock data recovery (CDR)	number of CDR instances	up to 2; independently configurable	
, (c=,	algorithm	phase-locked loop (PLL), constant frequency	
	configuration	nominal bit rate, PLL order (first or second), PLL loop bandwidth, PLL damping factor, initial phase alignment, result selection during initial synchronization	
Mask testing with eye mask assistant	primary mask shape		
<i>,</i>	type	diamond, square, hexagon, octagon	
	dimensions	main and secondary height, main and secondary width, depending on selected shape	
	position	vertical offset, horizontal offset	
	secondary mask shapes		
	locations	any combination of left, right, top, bottom	
	position	horizontal and vertical offset with respect to center of primary mask shape	

R&S®RTP-K19 zone trigger

General description	The R&S®RTP-K19 zone trigger the display.	The R&S®RTP-K19 zone trigger enables the triggering on user-defined zones drawn or the display	
Source	the dioplay.	acquired waveforms (input channels), math waveforms	
Zone definition	number of zones	up to 8	
	shapes	rectangles, polygones	
	types	must intersect, must not intersect	
	combination of zones	logical combination of zones of multiple sources using Boolean expressions	
Trigger compatibility		compatible with the trigger modes edge, glitch, width, runt, window, timeout, interval, slew rate, data2clock, pattern, state, serial pattern, trigger qualification, and sequence trigger	

R&S®RTP-K21 USB 2.0 compliance test

The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTP-K21 performs USB 2.0 compliance test measurements with R&S®ScopeSuite, including tests for USB 2.0 (high speed), USB 1.1 (full speed) and USB 1.0 (low speed) with the R&S®RTP. R&S®ScopeSuite supports the R&S®RT-ZF1 USB 2.0 compliance test fixture set and the Allion USB test fixture solutions and the USB-IF signal quality board device/host.

R&S®RTP-K22 Ethernet compliance test (10/100/1000BASE-T/EEE)

The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. R&S®RTP-K22 performs Ethernet compliance test measurements with R&S®ScopeSuite, including tests for 10BASE-T, 100BASE-TX,1000BASE-T and energy efficient Ethernet (EEE) with the R&S®RTP. R&S®ScopeSuite supports the R&S®RT-ZF2 Ethernet compliance test fixture set as well as the R&S®RT-ZF4 and R&S®RT-ZF5 for EEE.

R&S®RTP-K35 bus analysis

General description		The R&S®RTP-K35 bus analysis option adds bus measurements and analysis functions for dedicated protocols.	
	supported protocol options	R&S®RTP-K1 (I²C, SPI), R&S®RTP-K2 (UART), R&S®RTP-K3 (CAN, LIN), R&S®RTP-K8 (Ethernet), R&S®RTP-K9 (CAN-FD), R&S®RTP-K40 (RFFE), R&S®RTP-K57 (100BASE-T1)	
Measurements	field value	allows the selection of frame types and displays the value of a specified field; the value can be displayed as track and histogram	
	frame to frame	measures the distance between the starts of two selectable frame types in seconds	
	trigger to frame	measures the distance between the trigger event and the start of a selectable frame type in seconds; alternatively, measures the distance between the start of a selectable frame type and the trigger event	
	frame count	counts the total number of frames in each acquisition	
	gap time	measures the distance between the end of a selectable frame type to the start of another selectable frame type in seconds	
	bus idle ratio	measures the percentage of idle time on a bus; idle time is defined as the time where the bus is not occupied by frames	
	main bit rate	measures the main bit rate of a protocol based on the relevant bits in a frame; if a protocol provides multiple bit rates, the most relevant bit rate is being measured	
	secondary bit rate	for protocols with multiple bit rates, the secondary bit rate is available	
	frame error count	counts the total number of erroneous frames in each acquisition	
	frame error rate	measures the percentage of erroneous frames in relation to the total frames	
	consecutive frame error rate	measures the percentage of follow up (consecutive) frame errors, ignoring all single frame errors	

R&S®RTP-K37 spectrogram

General description	, ,	The R&S®RTP-K37 spectrogram option allows advanced signal analysis in the frequency domain by visualization of the frequency spectrum versus time.	
Spectrogram	display characteristics	spectrogram display; a separate spectrogram can be created for each FFT display; each FFT segment of a captured acquisition is displayed in a separate spectrogram line support of logarithmic frequency x-axis	
		11 0 1 7	
	number of spectrograms	up to 4	
	signal colors	predefined or user-defined color tables for persistence display with the spectrogram	
	time lines	in stop mode two separate time lines can be used to navigate through a spectrogram in time; for each time line the relevant FFT segment is displayed in a diagram; the difference in acquisition time between the timelines is displayed	

R&S®RTP-K39 user-defined math

General description	The R&S®RTP-K39 user-defined math option provides a Python interface to apply user
	functions defined by Python scripts to the waveform processing. The output can be
	visualized as a waveform math signal.

R&S®RTP-K99 R&S®ScopeSuite automation

The option is used in combination with the free-of-charge R&S®ScopeSuite PC software, which can be downloaded from the Rohde & Schwarz website. It requires matching compliance test options (see below). R&S®RTP-K99 makes it possible to automate the supported compliance options remotely. After remote execution of a test case the user can collect the results to process them in a proprietary software to create own reports.

R&S®RTP-K136 advanced eye analysis (8 Gbps)

General description	The advanced eye analysis allows the user to generate eye diagrams from long multi- period acquisitions of clock signals, hardware-supported clock data recovery up to a bit rate of 8 Gbps, and serial data signals. It allows the fine control of the signal content that contributes to the eye diagram and enables the advanced analysis, measurement, mask test and navigation functions.		
General configuration	number of eye diagram instances	up to 4; independently configurable	
	main source	analog channels, differential channels, math channels, reference channels, track channels	
	timing reference source	analog channels, differential channels, math channels, reference channels, track channels	
	horizontal settings	range, position; expressed in absolute time or relative to user-defined bit rate	
Display	persistence	50 ms to 50 s, or infinite	
	trace colors	predefined or user-defined color tables	
	eye stripe	displays position of eye diagram slices and masks violations time-correlated to the main source waveform; always enabled, for mask tests only, disabled	
Qualification	gate	chabled, for mask tests only, disabled

R&S®RTP-K140 high speed serial pattern trigger (8 Gbps)

General description	functions for simple or complex	The R&S®RTP-K140 high speed serial pattern trigger option provides triggering functions for simple or complex combinations of bit patterns or 8b10b words up to a bit rate of 8 Gbps including clock data recovery.		
Source	data	any analog channel		
	clock	any analog channel or extracted from data channel by using a clock data recovery		
Trigger types	single bit pattern	up to 160 bit; wildcards supported		
	dual bit pattern	two bit patterns with 160 bit each connected with logical OR; wildcards supported		
	complex word pattern	frame alignment by bit pattern of up to 32 bit or timeout; up to 4 bit patterns (up to 160 bit in total) connected with logical AND or OR; conditions: $=$, \neq , $<$, $>$, \geq , \leq , in range, out of range; bit offset, length and search range definable for each pattern		
	8b10b	aligns on selectable comma symbol; trigger condition of up to 16 K/D symbols including wildcards; disparity error, symbol error		
	PRBS error	locks to PRBS sequences of type 7, 9, 11, 15, 16, 17, 20, 23, 29, 31 and triggers on error		
Clock data recovery	bit rate	21 kbps to 8 Gbps; supports bit rate estimation		
	unit interval position	0 to 1

Service at Rohde & Schwarz You're in great hands

- Customized and flexible
 Uncompromising quality
 Long-term dependability

Rohde & Schwarz

The Rohde&Schwarz technology group is among the trailblazers when it comes to paving the way for a safer and connected world with its leading solutions in test&measurement, technology systems and networks & cybersecurity. Founded 90 years ago, the group is a reliable partner for industry and government customers around the globe. The independent company is headquartered in Munich, Germany and has an extensive sales and service network with locations in more than 70 countries.
