

Series

Mixed Signal Oscilloscope

Lineup includes 200 MHz, 350 MHz, 500 MHz bandwidth models
Lightweight and compact
Large 8.4-inch LCD display

Long memory: Up to 250 M points (with /M3 option)
High speed sampling: Up to 2.5 GS/s (1.25 GS/s with 4 ch)

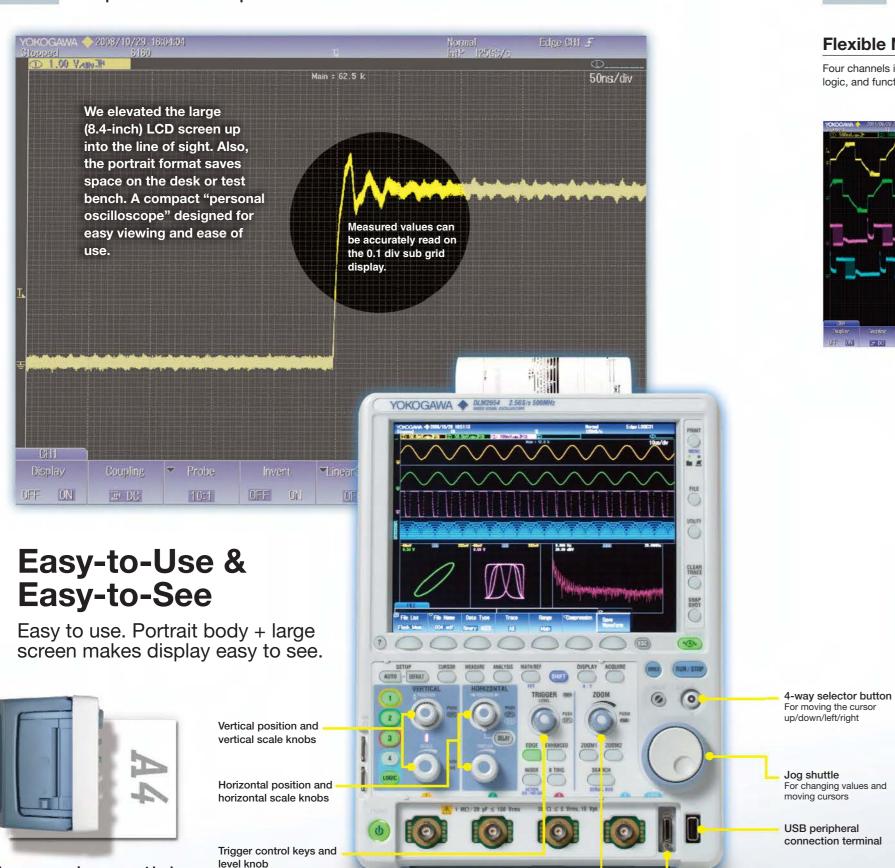

sability

Compact & intuitive operation

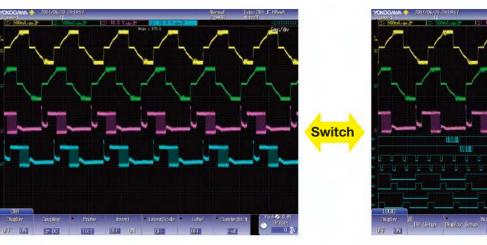

Elexibility

Switch between analog and logic channels

Flexible MSO input

Logic input connector

Four channels is not sufficient to view the functioning of digital control circuits. The DLM2000 series converts 4 ch of analog input to 8-bit logic, and functions as a 3 ch analog + 8-bit logic MSO (mixed signal oscilloscope).

4 ch analog

3 ch analog + 8-bit logic

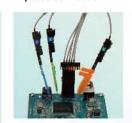

The performance of up to 11 inputs by converting to logic

Using logic input, up to 11 input signals can be observed simultaneously as 3 ch of analog and 8-bit logic. It is not only possible to use logic input for observation of data and control signals, or as a trigger source, but also for logic input analysis of I2C, SPI and some other serial busses.

Logic probe for the DLM2000

Fast data processing with ScopeCORE

With our proprietary ScopeCORE fast data processing IC, real time display is possible even when simultaneously measuring multichannel signals of 11 inputs.

data processing IC

ScopeCORE fast

Large screen in a compact body

Footprint is approximately 2/3 the size of an A4 size paper (depth of approximately 200 mm)

Zoom control keys and

magnification knob

Large capacity memory up to 250 Mpoints

Long memory is necessary to keep high speed sample rate in long term measurement.

<Basic Formula> Measuring time = Memory length/Sample rate

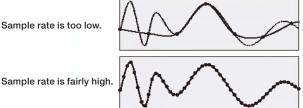

If 250 Mpoints (Memory expansion option /M3) is installed, Max. 0.2 sec waveform can be captured even at 1.25 GS/s sample rate when taking 2 ch measurements in Single mode.

Relationship between measuring time and sample rate in 250 Mpoint

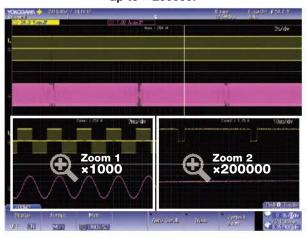

| Sample rate | Maximum measuring time |
|-------------|------------------------|
| 1.25 GS/s | 0.2 s |
| 125 MS/s | 2 s |
| 12.5 MS/s | 20 s |
| 1.25 MS/s | 200 s |
| 125 kS/s | 2000 s |
| 62.5 kS/s | 5000 s |

Caution is needed when using oscilloscope that does not have enough memory, which can cause lack of sample rate and possible failure capturing accurate waveform.

Sample rate is too low.

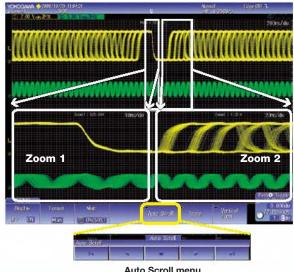

Detailed waveform measured for 20 seconds are shown in 20 milliseconds and 100 microseconds span.

Zoom & search function

With 2 different zoom location at the same time and variety of search function lets you pull out and display necessary data effectively.

Zoom two locations simultaneously

Because the DLM2000 series lets you set zoom factors independently, you can display two zoomed waveforms with different time axis scales at the same time. Also, using the Auto Scroll function, you can automatically scroll waveforms captured in long memory and change the zoomed location. With Auto Scroll you can choose forward, backward, fast-forward, scroll speed, and other control options.

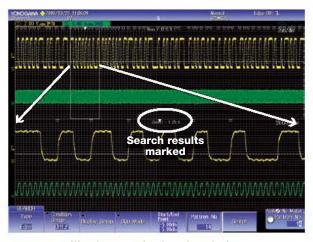

Auto Scroll menu

Zoom Search function

This function searches captured waveforms in the long memory and displays waveforms that meet the search criteria in the zoom area. The locations of the found waveforms are marked on screen (vshows the current location).

• Waveform search criteria

Edge, edge (with conditions), state pattern, pulse width, state width, serial bus (only on models with the serial bus analysis option)

Waveform search using edge criterion

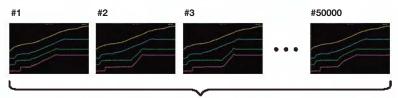

Automatically save previously captured waveforms

You can replay waveforms later on, so you'll never miss an abnormal waveform

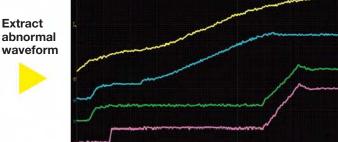

With the DLM2000 series, up to 50000 previously captured waveforms can be saved in the acquisition memory. With the History function, you can display just one or all of the previously captured waveforms (history waveforms) on screen. You can also perform cursor measurement, computation, and other operations on history waveforms. Using the History function, you can analyze rarely-occurring abnormal signals.

Can reproduce channels and their relationship which is difficult to view in accumulate display mode.

Accumulate display mode

Single acquisition display mode

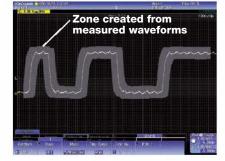

History search function

Various search methods are available to search waveform which meet your requirements up to 50000 waveform history records.

Example of specified waveform search

Searching for waveforms that pass through or do not pass through a rectangular zone placed on screen.

Searching for waveforms in zones created by moving measured waveforms up/down/ left/right.

Replay function

You can automatically play back, pause, fast forward, and rewind waveform history record.

Functionality

Large selection of triggers and filters

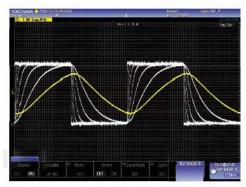

Real time filter with optimum noise reduction supports a wide range of frequencies (from 8 kHz to 200 MHz)

The DLM2000 series has two types of filters, one processed at the input circuit and one based on MATH functions. These filters are effective for rejecting unwanted signals, allowing observation of only the desired bandwidths.

Real time filters

Each channel has 14 low pass filters available from 8 kHz to 200 MHz. Waveforms of limited bandwidths are stored in internal memory.

Cutoff frequencies: 200 MHz, 100 MHz, 20 MHz, 10 MHz, 5 MHz, 2 MHz, 1 MHz, 500 kHz, 250 kHz, 125 kHz, 62.5 kHz, 32 kHz, 16 kHz, and 8 kHz

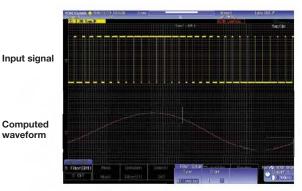

Processing with built-in filters

Computed digital filters

The input waveform can be filtered using an IIR filter, which is a MATH function. Filtered waveforms can be displayed at the same time as the input waveform for comparison. You can select low pass or high pass filters.

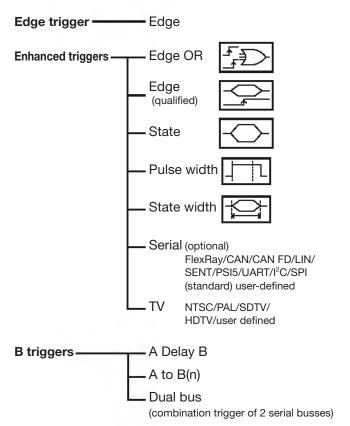

Cutoff frequency setting range: 0.01 Hz to 500 MHz

Filtering of a PWM waveform using computation

Trigger Function capturing combined analog/digital complex waveforms

The DLM2000 series comes with a variety of easy-to-configure triggers combining analog and logic inputs such as edge, enhanced, and B triggers.

-Trigger function example-

•A to B(n) trigger

Example: Trigger on the 7th edge of signal on B. This is effective for measurements with shifted timing, such as non-standard video signal vertical/horizontal periods or motor reference position pulses and drive pulses.

Serial pattern trigger (user defined)

Example: Trigger on an arbitrarily set pattern of up to 128 bits. This is effective for detecting ID/Data and other portions of proprietary communication formats.

Pattern configuration screen

Dual bus trigger

Example: Trigger on a combination of CAN and LIN bus triggers. I^2C + SPI bus triggers, and other combinations are possible.

Trigger when either LIN or CAN bus signal conditions become true

Range of functions that help operation efficiency

Displays trends of peak-to-peak or pulse width per cycle

Measure function and statistics

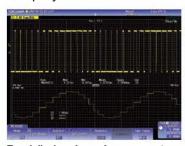

Twenty-nine waveform parameters are included such as: maximum, minimum, peak-to-peak, pulse width, period, frequency, rise/fall time, and duty ratio. Automated measurement can be performed using up to 30 of these waveform parameters. Also, waveform parameters

can be measured repeatedly, and the statistical values displayed (mean, maximum, minimum, standard deviation, etc.).

-Trend and histogram displays-

Waveform parameters such as period, pulse width, and amplitude can be measured repeatedly and displayed in graphs. In a single screen you can observe period-byperiod fluctuations, compute amplitudes every screen using multiple waveforms, and display amplitudes as trends. You can also display histograms referencing the voltage or time axis using

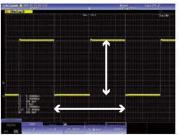

Trend display of waveform parameters Histogram display using the time axis

values from repeated automated measurement of waveform parameters.

Measures voltage/time differences automatically

-Cursor Measurement-

Cursors can be placed on the displayed waveform from signal data, and various measurement values at the intersection of the cursor and waveform can be displayed. There are five types of cursor; ΔT , ΔV , ΔT & ΔV , Marker, Degree Cursor.

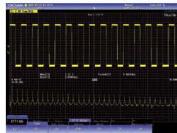

Simultaneous level and time difference measurement with the ΔT&ΔV cursor

Analyzes frequency spectrums

-FFT analysis-

Up to 2 FFT analyses can be performed simultaneously. FFT can be performed on computed waveforms in addition to the actual waveforms on CH1 to CH4. Analysis can be performed on limited bandwidth waveforms by filtering, periodic changes of rotary objects, and other phenomena.

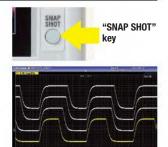

FFT analysis

Keeps waveforms with one push

-Snapshot-

By pressing the SNAPSHOT key to the lower right of the screen, you can freeze a white trace of the currently displayed waveform on the screen. You can press the key repeatedly and conveniently leave traces for comparing multiple waveforms. Also, snapshot data recorded on screen can be saved or loaded as files, and can be recalled for use as reference waveforms when making comparisons.

Using snapshots (white waveforms)

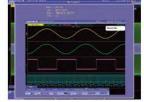

Displays stored files in thumbnail format

-Thumbnails of saved files-

Thumbnails of waveform data, waveform image data, and Wave-Zone files can be displayed. The image and file names are shown so that you can view screen image contents while copying or deleting files. A file can be enlarged to confirm the data.

Thumbnail can be viewed full-size

Has a GO/NO-GO function

—Action on trigger—

GO/NO-GO can be determined using trigger conditions, zone waveforms, measurement parameters, and other criteria. For NO-GO, actions can be carried out at the same time such as sounding a buzzer, saving the current waveform, or sending notification to a designated e-mail address. Waveforms in which an abnormality occurred can be saved for confirmation and analysis of the phenomena at a later time.

Abnormal waveform detected

Can check functions with graphical online help

You can view detailed graphical explanations of the oscilloscope's functions by pressing the "?" key in the lower left of the screen. This lets you get help on functions and operations on screen without having to consult the user's manual.

Specialty Analysis option for application

Serial analysis function options (/F1 to /F11)

-UART (RS232)/I²C/SPI/CAN/CAN FD/LIN/FlexRay/SENT/PSI5/CXPI-

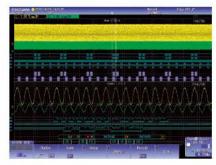

Triggers for embedded systems and in-vehicle bus signals are supported along with decode display analysis (serial bus analysis option only on 4 ch models. Trigger functions of some of the serial buses are not supported). Logic input can also be used for specific serial buses (UART, I2C, SPI, SENT).

Inputs supported for serial bus analysis

I²C SPI UART LIN CAN CAN FD FlexRay SENT PSI5 CXPI Analog input Yes Yes Yes Yes Yes Yes Yes Yes Yes Logic input Yes Yes NA NA NA NA Yes NA NA

Intelligent serial bus auto setup: Complicated trigger and decode settings such as bit rate and threshold level are automatically detected by DLM2000.

Simultaneous analyses of four different busses: Up to four busses can be analyzed simultaneously. Waveforms and analysis results from busses with different speeds can be displayed using 2 Zoom windows.

Simultaneous analyses of I2C and SPI

Four bus decode and list display

Accessories Related

PBDH1000 differential probe (701924)

1.0 GHz bandwidth $M\Omega$, approximately 1.1 pF Maximum differential input voltage range: ±25 V

Differential probe (701920)

DC to 500 MHz bandwidth 100 kΩ, approximately 2.5 pF Maximum differential input voltage range: ±12 V

Power supply analysis option (/G3, /G4)

Dedicated power supply analysis options are available (4 ch models only) for switching loss, joule integral (I2t), SOA (safe operating area) analysis, harmonic analysis of power supply current based on EN61000-3-2, and other power parameter measurement such as active power, power factor etc.

Switching loss analysis

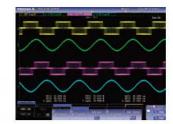

Utilizing the long memory capability, voltage and current waveforms over long cycles can be input for computation of switching loss (V(t) \times i(t)).

A wide variety of switching loss analyses are supported, including turn-on/off loss calculation, loss including continuity loss, and loss over long cycles of 50 Hz/60 Hz power line.

Power parameter measurement

Automated measurement of power parameters for up to two pairs of voltage and current waveforms, such as active power, apparent power, power factor etc. Values can be statistically processed and caluculated.

Differential probe (701926)DC to 50 MHz 5000 Vrms/7000 Vpeak

| Supported transfer standards | High Speed, Full Speed |
| Supported class | USBTMC-USB488 (USB Test and Measurement Class Ver. 1.0) |

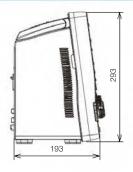

Ethernet (/C10 and /C11 Options)

| Connector | RJ-45 connector × 1 | |
|----------------------|---------------------------|---|
| Transmission methods | Ethernet (1000BASE-T/100 | DBASE-TX/10BASE-T) |
| Supported services | Server: FTP, HTTP, VXI-11 | Client: FTP, SMTP, SNTP, LPR, DHCP, DNS |

| General Specifications | |
|-----------------------------|---|
| Rated supply voltage | 100 to 240 VAC |
| Rated supply frequency | 50 Hz/60 Hz |
| Maximum power consumption | 170 VA |
| External dimensions | 226 (W) × 293 (H) × 193 (D) mm (when printer cover is closed, excluding protrusions) |
| Weight | Approx. 4.2 kg, With no options |
| Operating temperature range | 5°C to 40°C |

1 Measured under standard operating conditions after a 30-minute warm-up followed by calibration. Standard operating conditions: Ambient temperature: 23°C±5°C
Ambient humidity: 55±10% RH
Error in supply voltage and frequency: Within 1% of rating
12 Value in the case of repetitive phenomenon. The frequency bandwidth of a single-shot phenomenon is the smaller of the two values, DC to sampling frequency/2.5 or the frequency bandwidth of the repetitive phenomenon.
13 When the input section is shorted, the acquisition mode is set to Normal, accumulation is OFF, and the probe attenuation is set to 1:1.
14 Acquisition rate does not vary with an increase or decrease in channels.
15 The LCD may include a few defective pixels (within 4 ppm over the total number of pixels including RGB).
16 For 4 ch model only.
17 Sync signal from ECU and the signal from sensors are analyzed.
18 If the trigger function is required, please contact our sales representative.

Standard Main Unit Accessories
Power cord (1 set), Passive probe¹¹, Protective front cover (1 set), Soft carrying case for probes (1 set), Printer roll paper (for //Bō option) 1 roll, User's manuals¹²

11: Logic probes sold separately. Please order the model 701988/701989 accessory logic probes separately.
22: One of these must be selected.

- ?2: One of these must be selected.
 ?3: Specify this option when using current probes or other differential probes that don't support probe interface.
 *4 to '8: Only one from the each note can be selected at a time.
 *9: The 701938 probes are not included when this option is selected.
 *10: The 701939 probes are not included when this option is selected.
 *11: 701938 (for 710105 and 710110) or 701939 (for 710115, 70120, 710125 and 710130), per number of channels. When either /EX22 or/EX24 option is selected, no 701938 is included. When either /EX52 or /EX54 option is selected, no 701938 is included.
 *12: Operation guide as the printed material, and User's manual as CD-ROM are included.
 *13: If the trionger function is required, please contact our sales representative.
- 13: If the trigger function is required, please contact our sales representative

| | -X1 | F4 -> F7/F6 -> F8 (add CAN FD) |

- *1: Separately sold license product (customer-installable).
 *2: If the trigger function is required, please contact our sales representative

Accessory Models

| - | | |
|--|---------|--|
| Name | Model | Specification |
| Logic probe (PBL100) | 701988 | 1 MΩ input resistance, toggle frequency of 100 MHz |
| Logic probe (PBL250) | 701989 | 100 kΩ input resistance, toggle frequency of 250 MHz |
| Passive probe ¹ | 701938 | 10 MΩ (10:1), 200 MHz, 1.5 m |
| Passive probe ^{'1} | 701939 | 10 MΩ (10:1), 500 MHz, 1.3 m |
| Miniature passive probe | 701946 | 10 MΩ (10:1), 500 MHz, 1.3 m |
| Passive probe (wide temperature range) | 702906 | 10 MΩ (10:1), 200 MHz, 2.5 m -40°C to +85°C |
| FET probe ⁻¹ | 700939 | DC to 900 MHz bandwidth, 2.5 MΩ/1.8 pF |
| 100:1 voltage probe | 701944 | DC to 400 MHz bandwidth, 1.2 m, 1000 Vrms |
| 100:1 voltage probe | 701945 | DC to 250 MHz bandwidth, 3 m, 1000 Vrms |
| Differential probe | 701920 | DC to 500 MHz bandwidth, max. ±12 V |
| Differential probe | 701921 | DC to 100 MHz bandwidth, max. ±700 V |
| Differential probe | 701922 | DC to 200 MHz bandwidth, max. ±20 V |
| Differential probe (PBDH1000) | 701924 | DC to 1 GHz bandwidth, 1MΩ, max. ±25 V |
| Differential probe | 701926 | DC to 50 MHz bandwidth, 5000 Vrms/7000 Vpeak |
| Differential probe (PBDH0150) | 701927 | DC to 150 MHz bandwidth, max. ±1400 V |
| Differential probe | 700924 | DC to 100 MHz bandwidth, max. ±1400 V |
| Differential probe | 700925 | DC to 15 MHz bandwidth, max. ±500 V |
| Current probe ^{*2} | 701917 | DC to 50 MHz bandwidth, 5 Arms, High-sensitivity |
| Current probe ^{*2} | 701918 | DC to 120 MHz bandwidth, 5 Arms, High-sensitivity |
| Current probe (PBC050) ² | 701929 | DC to 50 MHz bandwidth, 30 Arms |
| Current probe (PBC100) ² | 701928 | DC to 100 MHz bandwidth, 30 Arms |
| Current probe ^{*2} | 701930 | DC to 10 MHz bandwidth, 150 Arms |
| Current probe ^{*2} | 701931 | DC to 2 MHz bandwidth, 500 Arms |
| Deskew correction signal source | 701936 | For deskew correction |
| Printer roll paper | B9988AE | Lot size is 10 rolls, 10 meters each |
| Probe stand | 701919 | Round base, 1 arm |
| Soft carrying case | 701964 | With 3 pockets for storage |

- *1: Please refer to the Probes and Accessories brochure for probe adapters.
 *2: Current probes' maximum input current may be limited by the number of probes used at a time.

Accessory Software

| Name | Model | Specification |
|-----------------|-------------|---------------------|
| MATLAB tool kit | 701991 | MATLAB plug-in |

Yokogawa's Approach to Preserving the Global Environment

- Yokogawa's electrical products are developed and produced in facilities that have received ISO14001 approval.
- In order to protect the global environment, Yokogawa's electrical products are designed in accordance with Yokogawa's Environmentally Friendy Product Design Guidelines and Product Design Assessment Criteria.

This is a Class A instrument based on Emission standards EN61326-1 and EN55011, and is designed for an

industrial environment.

Operation of this equipment in a residential area may cause radio interference, in which case users will be responsible for any interference which they cause

Before operating the product, read the user's manual thoroughly for proper and safe operation.
