## PROGRAMMABLE AC POWER SOURCE MODEL 61700 SERIES

The Chroma Programmable AC Power Source model 61700 series delivers pure, 5-wire, 3-phase AC power. Unlike traditional 3-phase AC sources, it includes low power rating models at very low cost. Users can program voltage and frequency, and measure the critical characteristics of the output on its LCD display. It provides the ability to simulate all kinds of UUT input conditions to be utilized in R&D and QA. It is also suitable for commercial applications from laboratory testing to mass production.

The 61700 series AC Source supplies output voltages from 0 to 300VAC and can be set individually for each phase. Users also can set the phase angle from 0° to 360°. These kinds of functions allow the 61700 series to simulate unbalanced 3-phase power. With a wide output frequency range, from 15 to 1200Hz, it is suitable for avionics applications. The AC+DC mode extends the output function to simulate abnormal situations when the power line contains a DC offset.

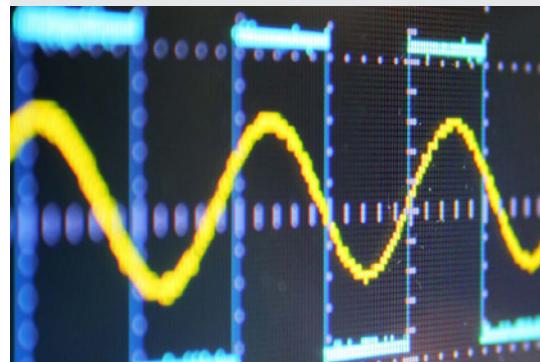

The 61700 series uses state-of-the-art PWM technology and a power factor correction circuit. These features allow it to generate very clean AC output with a typical distortion of less than 0.3%, and it can yield higher

efficiency and deliver more output power than other sources on the market.

By using advanced DSP technology, the 61700 series offers precise, high speed measurements including RMS voltage, RMS current, true power, power factor, current crest factor, and more.

The 61700 series offers an optional function to output transient voltage. This function includes LIST, PULSE, STEP and INTERHARMONICS modes. Users can easily program variant waveforms for immunity tests. The 61700 series can also be remotely controlled via powerful and user-friendly softpanel software through GPIB or RS-232 interfaces. The softpanel also includes a waveform editor that can edit up to 40th order harmonic components. With this, the 61700 series has the ability to output any distorted waveform desired.

With the self-diagnosis routine and protection against over power, over current, over voltage, over temperature, and fan fail, the 61700 series ensures quality and reliability for even the most demanding engineering testing and production line applications.

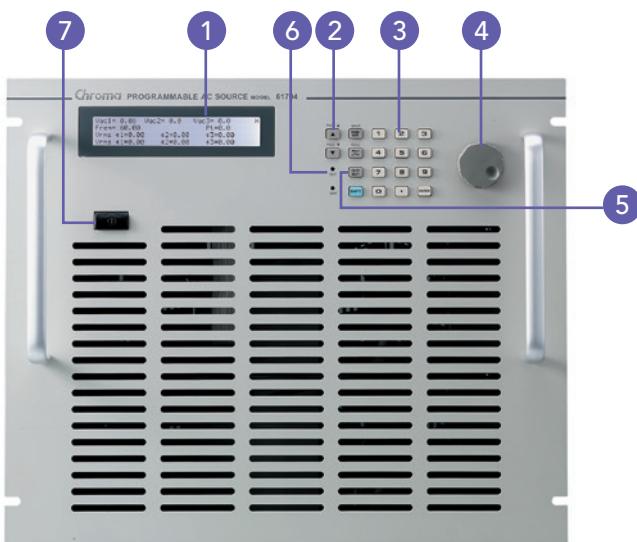

## COMPREHENSIVE MEASUREMENTS

By building in a 16-bit precision measurement circuit, the 61700 series AC source offers precision and high speed measurements. Such as RMS voltage, RMS current, true power, power factor, and current crest factor, VA (apparent power) and VAR (reactive power). Users can use rotary knob to change the measurement items shown on LCD display. They also can change page to see more measurement items.

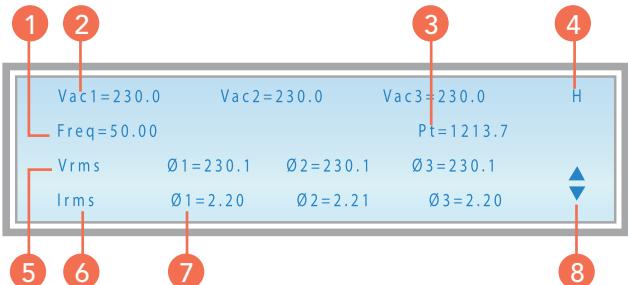

## SLEW RATE OF VOLTAGE

Programmable AC Source 61700 Series use DSP technology to program voltage waveform. Users can change the voltage in only one step. Or users can set the slew rate to get a gradual increase or decrease of voltage. It can help to easily test the line input range of the products, for example 190V-264V. It also can reduce the inrush current if setting the line in voltage increasing from a low level to a high level.

## APPLICATIONS

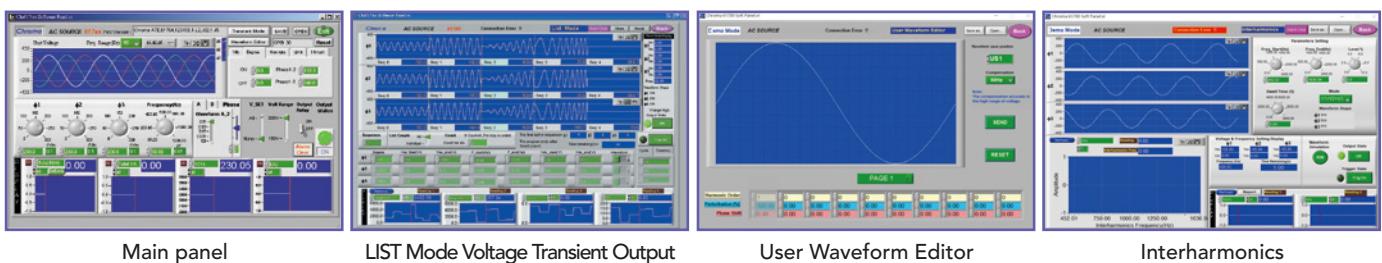

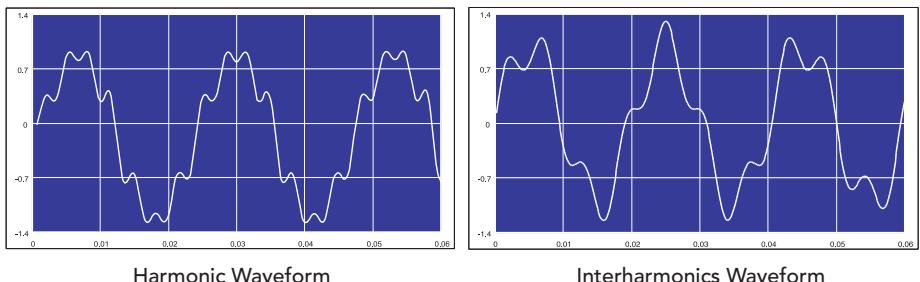

### POWER LINE DISTURBANCE SIMULATION (OPTIONAL FUNCTION)

In addition to the steady output voltage and frequency programming, Chroma AC power source 61700 series provides powerful functions PULSE, LIST and STEP to simulate all kinds of power line disturbance conditions.

### HARMONICS, INTERHARMONICS SYNTHESIS (OPTIONAL FUNCTION)

Users can make use of the softpanel software (A617001) to synthesize harmonic waveforms and store it in the memory of the AC source. An interharmonic sweeping function from 0.01Hz to 2400Hz is also available to generate a distorted non-periodic waveform directly from 61700 series front panel.
